

Credit Name: Procedural Programming 1
Assignment Name: Chap 5

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

A part of the problem I found confusing was trying to use the correct type of loop whenever required. I resolved it by figuring out the conditions of whichever structure I required and using a loop structure that fits those most efficient

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

How did you decide on the tools, data structures, or algorithms to use?

I chose data structures that were simple and correct for each task. The assignments were mainly loops so data structures revolved around those

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

How did you test your solution along the way to make sure it was working?

I wrote the code in pieces so as to make the process simpler to debug and improve.

Overcoming Challenges

What part of the problem was the most difficult for you?

How did you handle moments when you felt stuck or unsure of what to do next?

The most difficult was figuring out how to problem solve when a loop or operation failed but once I began debugging it became simpler

Learning

Was there anything you learned that you think will help you with future challenges?

The debugging process with loops may be important in the future
