Assignment Name: Cipher

Error Log Entry

What error message did you encounter (if any)? Output error

What unexpected behavior did your program exhibit? When trying to output the encrypted message it would only show the first word and stop

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.) using input.next() instead of input.nextLine() which is for strings

Include a screenshot of specific lines of code.

```
System.out.println("Enter a string: ");
String message = input.next();
char[] messenger = message.toCharArray();

for (int i = 0; i < messenger.length; i++) {
    if (Character.isLetter(messenger[i])) {
        messenger[i] += 2; }
}

String result = new String(messenger);
System.out.println("Encrypted: " + result);
```

How did you fix the issue? changing it to nextLine()

Provide the corrected code or solution using a screenshot.

```
String message = input.nextLine();
char[] messenger = message.toCharArray();

for (int i = 0; i < messenger.length; i++) {
    if (Character.isLetter(messenger[i])) {
        messenger[i] += 2; }
}
```
